Creating a profile

Connecting to the FTP site

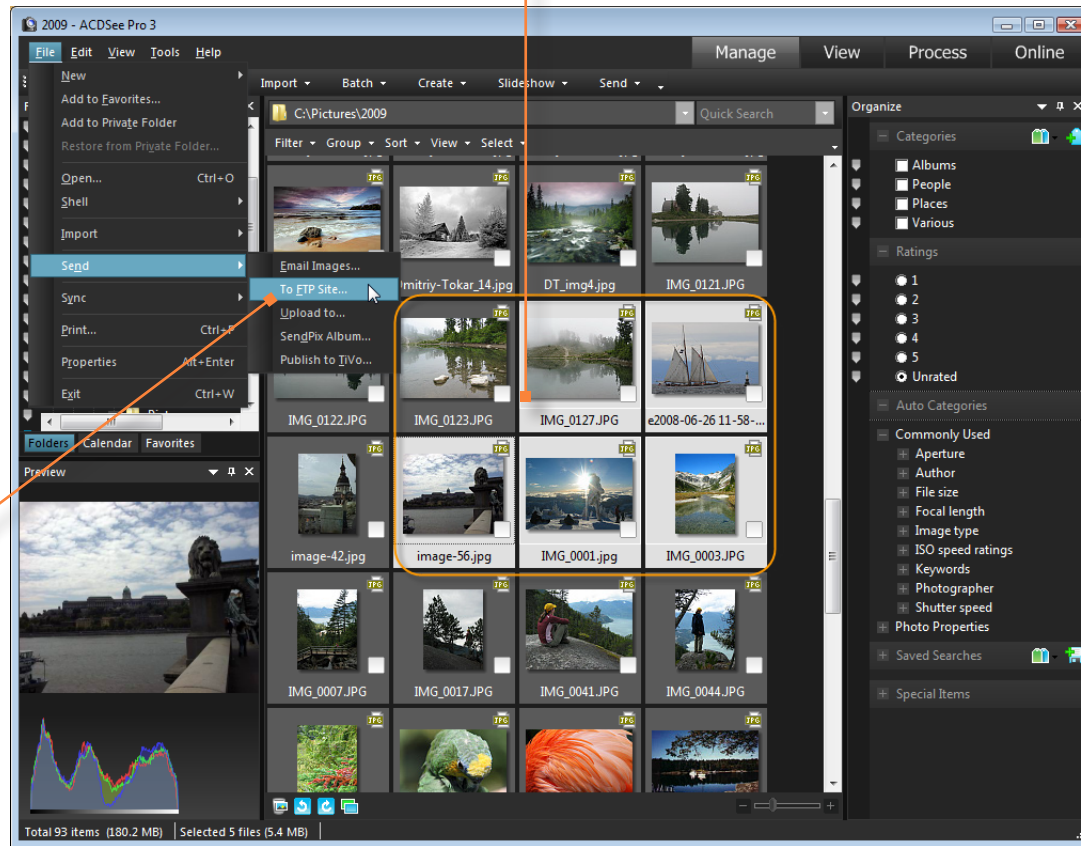

Resizing images

Uploading images

Key concepts

Click **Create New Profile**.

Profile name: Type a name for the FTP site.

Host: Type the address for the FTP site (e.g. ftp.example.com, 54.67.117.35)

Port: Default port number is 21.

Enter your **Username** and **Password** if the FTP site requires them. If the FTP site does not require a username and password, select **Anonymous**.

Uploading images

Key concepts

Now that you have saved your FTP profile, click **Connect** to connect to the FTP site.

Once connected, click **Browse** and choose a destination folder.

Choose how duplicate files are handled in the Duplicate Files drop-down list:

Rename: Renames the uploaded file. For example, if you are uploading a pre-existing file called wedding.jpg, the uploaded file is then renamed wedding(1).jpg.

Replace: Replaces/overwrites the existing file on the FTP server with the one you are currently uploading.

Skip: Skips the file, so it is not uploaded.

Key concepts

Check to see if you learned these key concepts:

- » The FTP Uploader is designed to help accelerate your workflow. You can use it whenever you wish to upload your files to an FTP site.
- » Once you have created a profile you do not have to create another one unless you would like to use a different FTP site.
- » Based on the settings you select for duplicate files, the FTP Uploader can rename the file being uploaded, replace the existing file with the new one, or skip the upload for that file.
- » You can choose to resize images. Choose a size based on whether the images are for the web, printing, or archiving.
